                                                                                                The present invention relates to DNA encoding variants of protein with loop region and six hydrophobic helixes which facilitetes excretion of Lusine and/or Lusquine to outside of cell of a methanol assimilating bacterium when introduced into the bacterium. The methan is used for encoding a protein which facilitates excretion of Lulyshie, Lusquinie or both of these Lumino acids to outside of a cell of a methanol assimilating bacterium when DNA of the method is introduced into the bacterium. The present sequence represents a lysE24 protein from the struktacterium lactofermentum encoding sequence. (Updated on 27-OCT-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                         120

```
The present invention provides a number of nucleotide and protein sequences from the Coryneform bacterium Corynebacterium glutamicum. These are useful for identifying the mutation point of a gene derived from a mutant of coryneform bacterium, measuring expression amount and analysing the expression profile or expression pattern of a gene derived from coryneform bacterium, and identifying a homologum of a gene derived from coryneform bacterium, coryneform bacteria are useful for producing amino acids, nucleic acids, vitamins, saccharides and organic acids, particularly L-lysine. The present sequence is a nucleic acid described in the exemplification of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the European Patent Office
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                645

The enzyme has aspartate-semialdehyde dehydrogenase activity and can be used for growing amino acid-producing microbes. The present sequence encodes an enzyme of the invention

Also included are:

(1) a vector comprising a promoter operably linked to the nucleic acid conformation of the nucleic acid conformation of the vector; (3) and isolated proliferation is inhibited by the antisense nucleic acid; (4) an antibody capable of specifically binding antisense nucleic acid; (4) an antibody capable of specifically binding composition or the activity of a gene in an operon required for proliferation, (7) identifying a compound that influences the activity of required for proliferation, or that inhibits cellular proliferation, or that inhibits cellular proliferation of an pathway in which a proliferation-required gene or the biological pathway capables in which the test compound that inhibits proliferation of an open which the test compound that inhibits proliferation of an compound a activity (11) a culture comprising strains in which the gene product is overexpressed or underexpressed, (12) determining the extent compound sactivity; (11) a culture comprising strains in which the gene product is overexpressed or underexpressed, (12) determining the extent compound capating in which the strains is present in a culture or collection of confound an organism. The antisense nucleic acids are useful for the collarity collection of an organism. The antisense nucleic acids are incomposed for a compound for an organism of the prights proteins or screening for homologous nucleic acids are incomposed.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        1094 regrenacerregagecagracecececeaararraarrecagecreerregaaa 1035
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         drug discovery programs, or for screening homologous nucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, K. pneumoniae or P. aeruginosa. The present sequence is one of the target prokaryotic essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        TCGCGGGTTTTGGAATCGGTGGCCTTCGCCCAAATGTTGATGCCGGCGTCGTGGGAAATC 369

polypeptide or its fragment whose expression is inhibited by the antisense nucleic acid; (4) an antibody capable of specifically binding cantisense nucleic acid; (4) an antibody capable of specifically binding compound the polypeptide; (6) inhibiting cellular proliferation or the activity of a gene in an operon required for proliferation, or that inhibits biological pathway cequired for proliferation, or that inhibits cellular proliferation; (8) identifying a gene required for cellular proliferation or the biological pathway in which a proliferation-required gene or its gene product lies or a gene on which the test compound that inhibits proliferation of an organism acres; (9) manufacturing an antibiotic; (10) profiling a compound's activity; (11) a culture comprising strains in which the gene product is overexpressed or underexpressed; (12) determining the axtent of owlich each of the strains is present in a culture or collection of the which each of the strains is present in a culture or collection of the compound of an organism. The antisense nucleic acids are useful for identifying proteins or screening for homologous nucleic acids required for proliferation to isolate andidate molecules for rational cultification in cells other than S. tryphimurium, required for proliferation in cells other than S. arreus, S. tryphimurium, control format directly from WiPO at compound of the target of electronic format directly from WiPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ACA26520 standard; DNA; 1107 BP

Also included are:
(1) a vector comprising a promoter operably linked to the nucleic acid encoding a polypeptide whose expression is inhibited by the antisense nucleic acid; (2) a host cell containing the vector; (3) an isolated
                                                                                                                                                                       129

The invention relates to an isolated nucleic acid comprising any one of the fell antisense sequences given in the specification where expression of the fell. Also included are:

(1) a vector comprising a promoter operably linked to the nucleic acid included are:

(1) a vector comprising a promoter operably linked to the nucleic acid contains a polypeptide whose expression is inhibited by the antisense nucleic acid; (3) a host cell containing the vector; (3) an isolated polypeptide cor its fragment whose expression is inhibited by the antisense nucleic acid; (4) an antibody capable of specifically binding collypeptide; (5) producing the polypeptide; (6) inhibiting cellular proliferation or the activity of a gene in an operom required for proliferation or the activity of a gene in an operom required for proliferation, or that inhibits cellular proliferation; (8) identifying a gene product that an activity against a biological pathway required for proliferation, or that inhibits cellular proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound's activity; (11) a culture comprising strains in which the test compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a product is overexpressed or underexpressed; (12) determining the extent convict acids activity; (11) a culture comprising strains in which the strains is present in a culture or collection of strains; or (13) identifying the target of a compound that inhibits proliferation of strains; or (13) identifying the target of a compound that inhibits or servent confidention of an organism. The antisense nucleic acids are useful for the cellular proliferation to isolate candidate molecules acids required for collular proliferation to isolate candidate molecules acids required for cellular proliferation to isolate candidate molecules acids required for the cellular proliferation to isolate candidate molecules acids required for the cellular proliferation to isolate acids are usef
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New antisense nucleic acids, useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          drug discovery programs, or for screening homologous nucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, K. pneumoniae or P. aeruginosa. The present sequence is one of the target prokaryotic essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Zyskind JW;

the 6213 antieense sequences given in the specification where expression of the nucleic acid inhibits proliferation of a cell. Also included are:

CC (11 a vector comprising a promoter operably linked to the nucleic acid encoding a polypeptide whose expression is inhibited by the antisense cull containing the vector; (3) an isolated cull surface acid; (2) a host cell containing the vector; (3) an isolated cull surface acid; (4) an antibody capable of specifically binding cullisense nucleic acid; (4) an antibody capable of specifically binding cullisense nucleic acid; (4) an antibody capable of specifically binding cullisense nucleic acid; (4) an antibody capable of specifically binding culliseration or the activity of agene in an operon required for the proliferation, or that inhibits cellular proliferation; (7) identifying a compound that inhibits proliferation of the gene product or that has an activity against a biological pathway in which a proliferation, or that inhibits proliferation of an cranification of the strains agene required for cellular proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound's activity; (11) a culture comprising strains in which the gene compound that inhibits the compound's activity; (11) a culture comprising strains in which the gene compound that inhibits the compound's activity; (11) a culture comprising strains in which the gene compound is soverspressed or underexpressed, (12) determining the extent compound that inhibits the compound's activity; (11) a culture comprising strains in which the gene compound that inhibits the compound's activity; (11) a culture compound that inhibits the compound and or the strains is present in a culture or collection of conditiving proteins or screening for homologous nucleic acids required for proliferation in cells of the cellular proliferation in cells of the cellular profileration in cells of the cellular profileration in cells of the cellular profileration in cells of the cellular profileration in

GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Marc J. Rubenfield et al.
APPLICANT: Marc J. Rubenfield et al.
APPLICANT: Marc J. Rubenfield et al.
APPLICANT: Marc J. Rubenfield et al.
APPLICANT: Marc J. Ruchige Arib And Amino acid sequences Relating to Pseudomonas.
TITLE OF INVENTION: AEROGINOSA POR DIAGNOSTICS AND THERAPEUTICS
FILE REFERENCE: 107196.136
CURRENT PLING UNBER: 1089-102-18
PRIOR APPLICATION NUMBER: US 60/074,788
PRIOR APPLICATION NUMBER: US 60/094,190
PRIOR APPLICATION NUMBER: US 60/094,190
PRIOR PILING DATE: 1998-07-27
SEQ ID NOS: 33142
SEG ID NOS: 33142
                                                                                               APPLICANT: Warc J. Rubenfield et al.

APPLICANT: Warc J. Rubenfield et al.

TITLE OF INVERTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS.

TITLE OF INVERTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS

TITLE OF INVERTION: 107166.136

CURRENT APPLICATION NUMBER: US 60/074,788

FRIOR PELING DATE: 1998-02-18

                                                                                                                                                                                                                                                                                                                                                                                                                                                              ₽
                               APPLICANT: Marc J. Rubenfield et al.
TITLE DE INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS.
TITLE DE INVENTION: ARROGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
FILE REPERENCE: 107196.136
CURRENT APPLICATION NUMBER: US 60/074,788
PRIOR RELING DATE: 1999-02-18
PRIOR APPLICATION NUMBER: US 60/094,190
PRIOR FILING DATE: 1998-02-7
NUMBER OF SEQ ID NOS: 33142
SEQ ID NO 7571
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   1117

TITLE OF INVENTION: EXPRESSION OF MICROBIAL PROTEINS IN PLANTS FOR PRODUCTION IN TITLE OF INVENTION: PLANTS WITH IMPROVED PROPERTIES
TITLE REPREBENCE: 38-10(52052)8
CURRENT APPLICATION NUMBER: US/10/369,493
CURRENT FILING DATE: 2003-022-28
PRIOR APPLICATION NUMBER: US 60/360,039
PRIOR APPLICATION NUMBER: US 60/360,039
PRIOR PRIOR DATE: 2002-02-21
NUMBER OF SEQ ID NOS: 47374
SEQ ID NOS: 47374
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               384
